Acme Corp Operations Update 2026

1. Reno Line Capacity

Acme's Reno line ran at 94% of nameplate capacity in Q1 2026, up from 81% a year earlier. The Reno line now assembles about 260 battery packs per week for electric bus customers.

2. Reno Line Shift Pattern

A third shift was added to the Reno line in February 2026. Reno line staffing rose to 310 operators across three shifts, and overtime on the Reno line fell by 40%.

3. Reno Line Safety

The Reno line recorded 412 days without a lost-time incident. Acme introduced new thermal-runaway drills on the Reno line and retrained all Reno line supervisors.

4. Reno Line Maintenance

Planned maintenance on the Reno line moved to a predictive schedule. Unplanned downtime on Acme's Reno line dropped from 6.2% to 2.9% of scheduled hours.

5. Reno Line Shipments

Reno line shipments reached 3,100 packs in Q1 2026. Most Reno line output goes to three electric bus manufacturers in North America.

6. Reno Line Sub-Assemblies

Module housings and busbar sub-assemblies for the Reno line are supplied by Halvorsen Fabrication under a three-year agreement signed in January 2026.
